Video Door Phone

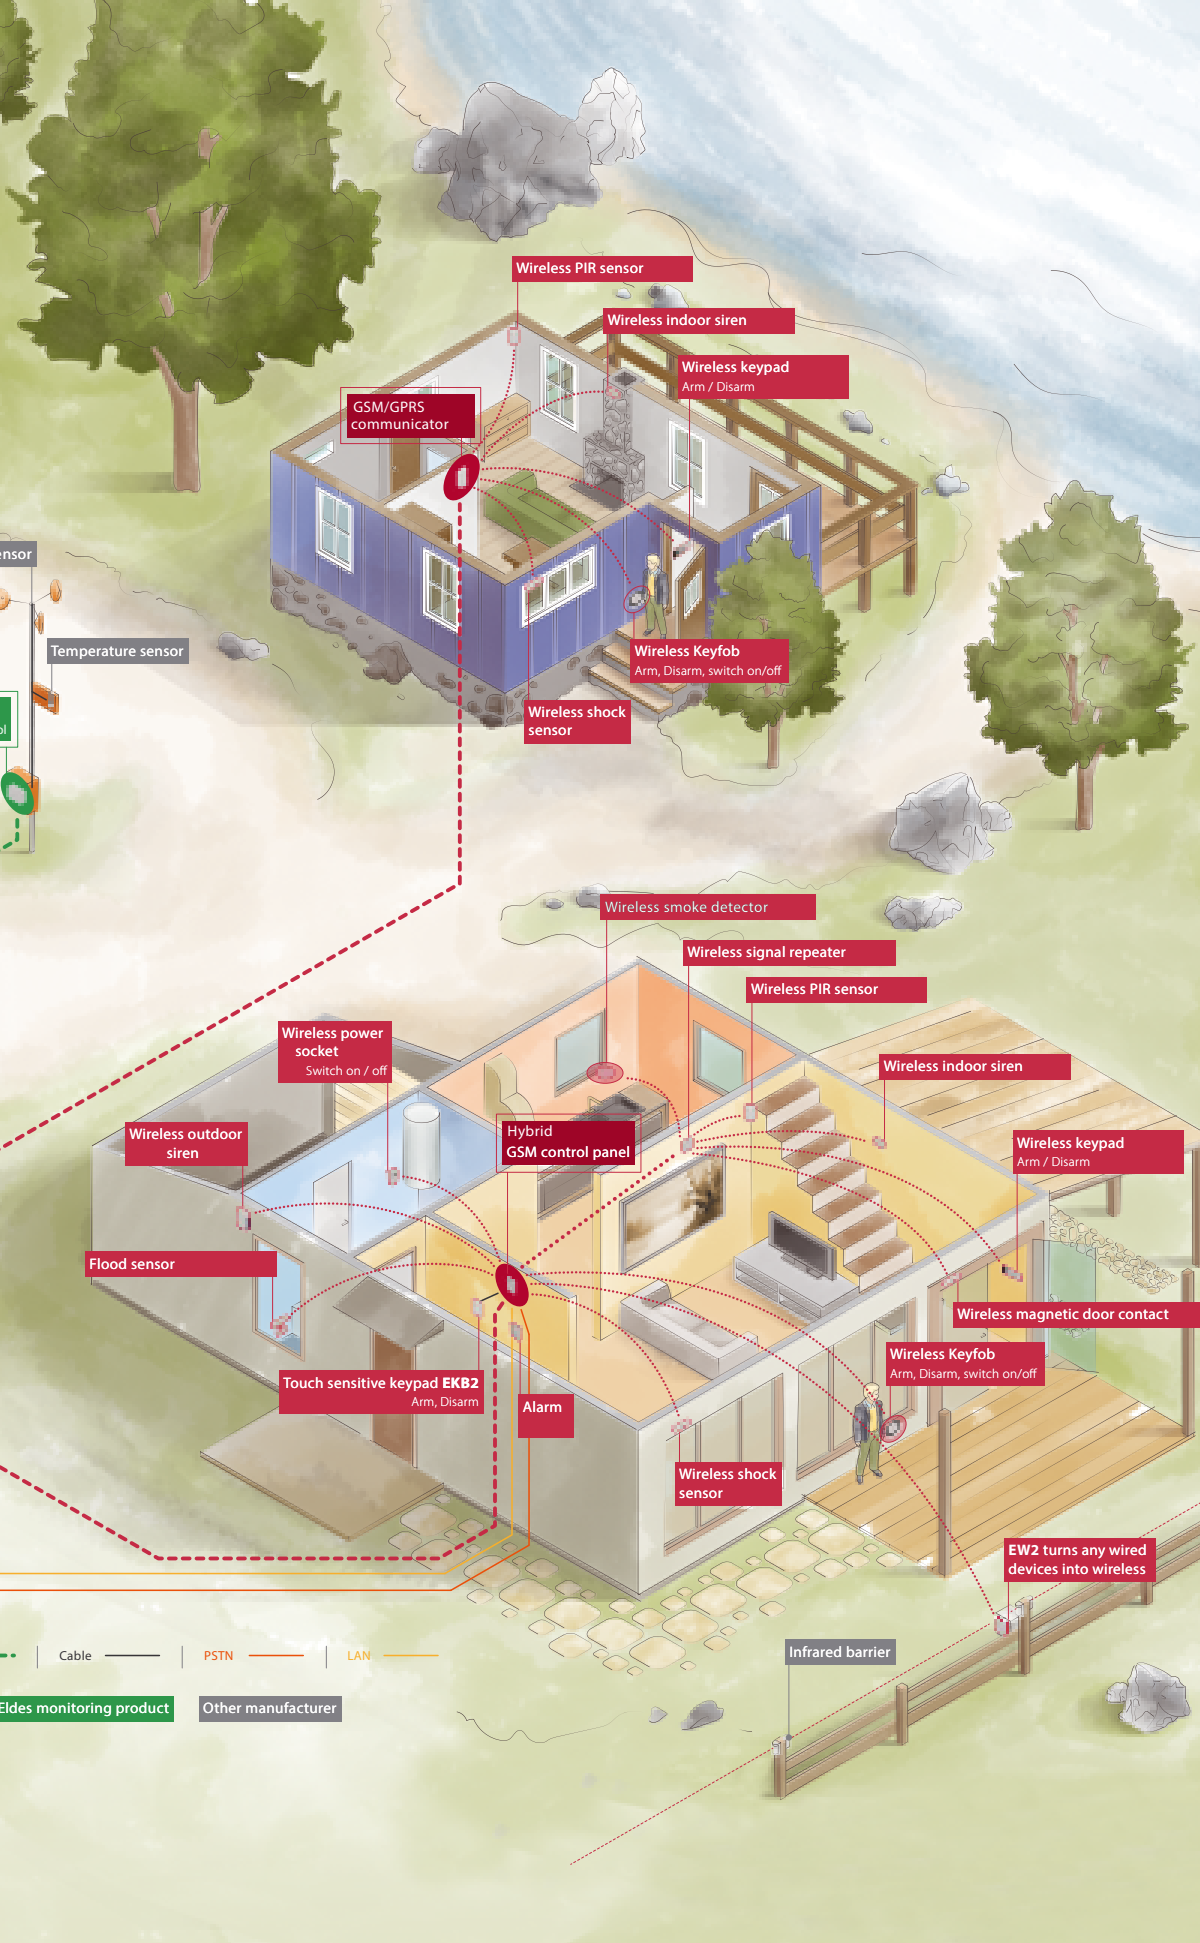

- Audio and video intercom
- Record video and pictures to SD card.
- Wireless monitor stations.
- Remote visitor video stream.
- View recorded photos & videos anytime.
- Unlock Electric gate locks with a touch of a button.
- Optional remote video camera.

Burglar Alarm System

Wired system

- Faster installation time
- Remote control of appliances
- Negligible running cost.
- Very user friendly
- Fully programmable zones
- Tamper Proof alarm systems
- Auto dialler
- CMS dialler
- Zones supervision facility
- Auto arming
- Remote key pad for better security
- Long lasting battery backup

Wireless system

- Faster installation time by 50%
- Remote control of appliances
- Designed to protect Residential and SME premises
- Wide variety of sensors.
- Cloud based monitoring system.
- SMS and call notification.
- Pet immunity.
- Tamper notifications
- Home & Away mode
- Inactivity & health monitoring
- Battery backup for sensors
- Multiple zones can be accommodated
- RF Signal strength indication & Jamming Detection.
- Robust multi million RF coding and special interferences.
- Special monitoring mode without triggering the alarm siren.
- Indicates Power failure or low battery.

Access Control

Biometric time & Attendance systems

Whether people are coming in or going out, take complete control. We provide features like tamper-proof credential systems, MI-FARE and contact-less card readers, and multiple input access modes for secure identity confirmation.

Various communication interfaces and protocols are available as well, including TCP/IP network interface and Wi-Fi standalone terminals, and customers' accounts always remain safe via RSA and AES encryptions.

Access control Systems

An electronic means of restricting access to a building or designated area.

Your business may require a restricted room to store confidential records and it may be necessary to limit access to that room to only certain employees.

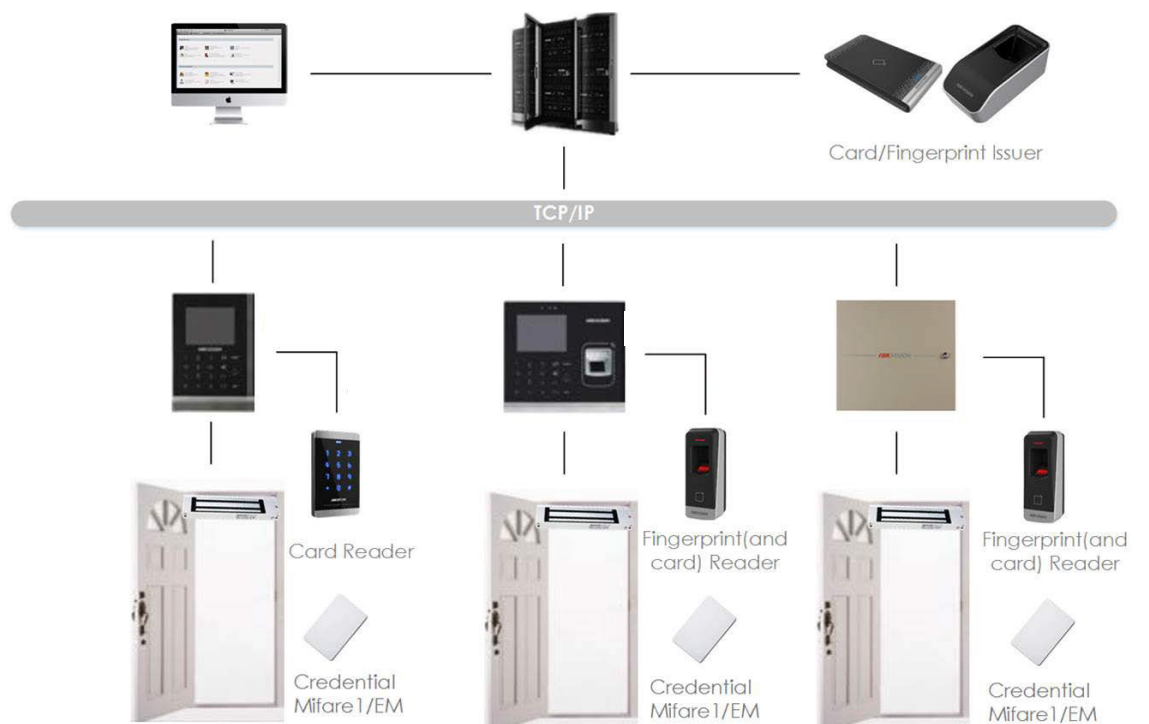

An access Control System will allow the business to limit access to the room only to the authorised employees.

Our scanners are sure to impress and not just for their beauty and design! They feature the latest biometric fingerprint technology, adding both security and sophistication.

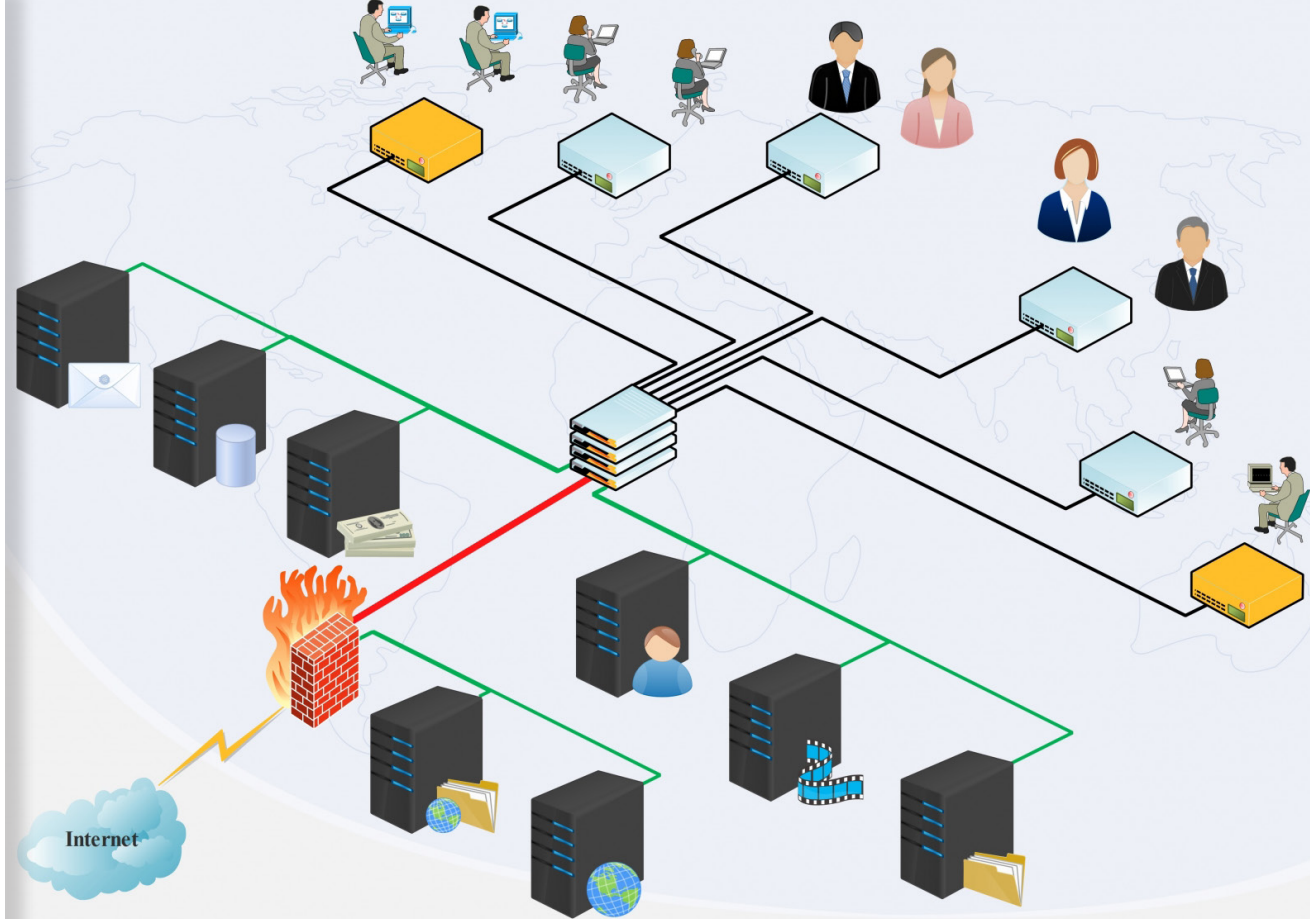

Features:

- No more lost keys
- Know who is coming and going
- No Undetected strangers
- Increases Safety
- Control multiple access across multiple properties
- Secure sensitive information

Reasons to review your network

- Taking advantages of technologies like Remote Desktop Services.
- Utilising VoIP or IP telephony, where your phone system runs on your own business network.
- Faster access to your applications.
- Enhanced security and accessibility, such as remote access from other sites or employee homes.
- Improved employee productivity and flexibility as your users will be able to access the resources they need faster and more easily greatly reducing their stress levels.

Computer Networking Infrastructure

Your network is a vital resource for your business and the latest technologies can deliver significant competitive advantages, from lower costs to higher levels of flexibility, productivity and functionality

One of the major concerns around businesses becoming increasingly entangled with technology is the ever present threat of sensitive data being compromised in security breaches & hacks. We provide a good Network Management System that will give you more visibility into your network environment and can keep you better informed of how data flows from one end of your network system to the

other. By monitoring your network with our tools you can be notified the moment any suspicious or unwanted activity is detected on your network.

A good Network Management System is the fact that it makes planning for growth more accurate and reliable. For every employee in your organisation, you need to budget accordingly in terms of networking resources such as bandwidth and storage space. Using a good Network Management System would result in better bandwidth and employees seamlessly accessing network services.

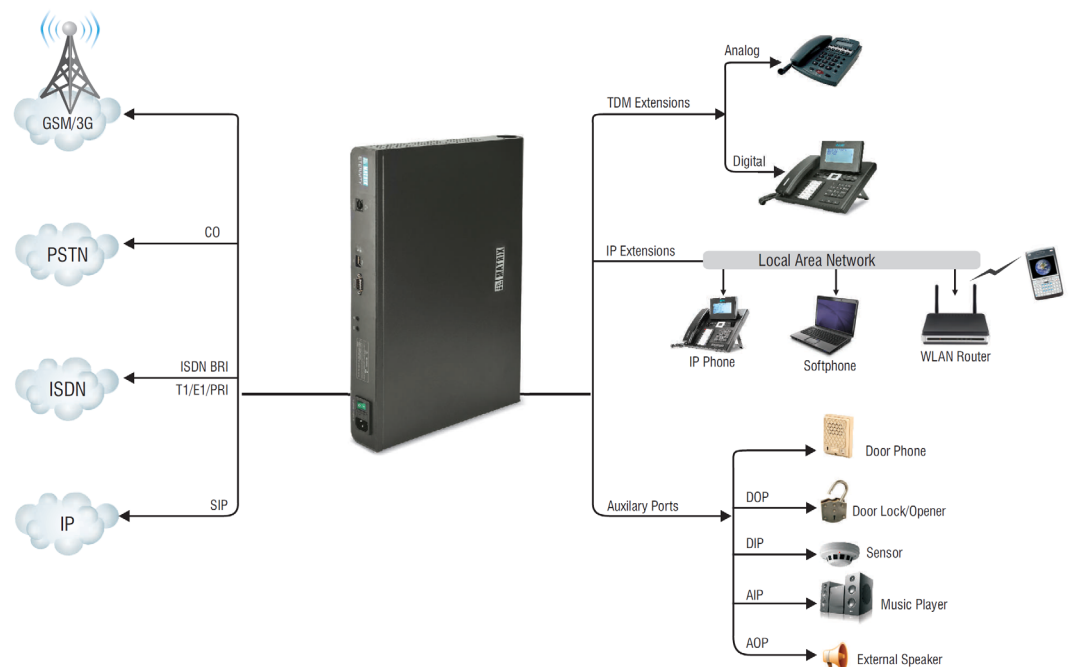

Telecommunication Systems

When your business is small, you can easily get by with one telephone line in to your office. Whether in office, your home, car or another location. But, as your business grows and you need to add more phones for staff who may be located centrally, or spread virtually around the country, things can get complicated with more telephone lines and more numbers.

Our PBX systems can improve your costs while making your working more flexible.

Services offered

- Internal Communications
- Centralised Control
- Automation
- Flexible call routing
- Internet Integration
- Hosted PBX
